

Open! If you want to gain Insiders Information.

Meet William, my secret Stock Picking Agent.

He doesn't work on Wall Street, nor does he work for Investment Banks.

Yet, he's one of the Best and most respected dealmakers in Canada.

His expertise is resources and commodities and he's visited countless project like mines, deposits and oil fields in over 100 countries (Including IRAQ).

Part of the "Economers" philosophy is to surround yourself with winners.

And Wiliam Shelby is a winner. [[Get William's FREE report here](#)].

We've travelled together to an underground Gold Mine and he even made me an incredible and rare 100x return.

That's extremely rare, but William seems to find these gems.

William has just focussed his attention on Lithium, and for a good reason

You can't drive anywhere on the road without seeing a Tesla, which has massive batteries made of Lithium.

Even Ferrari and Lamborghaini are going electric.

Electric vehicle sales have skyrocketed, and with them the demand for Lithium.

It's an element that China has a stranglehold and the USA is taking notice.

The Feds have demanded it a Critical Mineral.

Elon Musk is begging people to get into Lithium Mining.

Car companies like BMW, Mercedes and GM are all buying up projects and mines to secure lithium needed for future products.

There is a major push for made in North American Lithium

And William just put a whooping \$1 million buying up shares in a Lithium company code-named **“Project Yellowknife”**

We’ve asked William Shelby’s permission to share his detailed analysis of the company and he’s agreed to provide his report for you, our dear reader.

This is just the start of what William thinks is a multi-year lithium bull market.

And he has a million reasons for walking the walk.

Regards,

Robinson Alex Humme

PS: Full disclosure, I do invest with William

We’ve made a lot of money together.
